

1. Inner Container

Clinimed transport containers are made from an expanded polystyrene inner covered by an outer bag. Expanded polystyrene is 100% recyclable in the United Kingdom. Due to the bulkiness of the material, it is financially and environmentally expensive to send to landfill.

Remove inner container from outer bag and place into a recycling bin.

2. Outer Bag

The outer bag contains the NHSBT logo, presenting a security issue when discarded. The following instructions should be followed when discarding the outer bags.

- a. Remove outer bag from inner container.
- b. Cut NHSBT logo from the bag and cut into small pieces in order that the logo is no longer visible or viable.
- c. Place pieces into a bin.
- d. Cut remaining bag in several places ensuring that there is no possibility that it can be used again.
- e. Place pieces into a bin.
